RGB model input

Pseudo-depth target

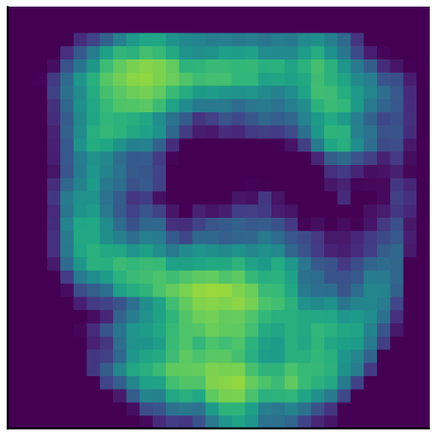

Target mask

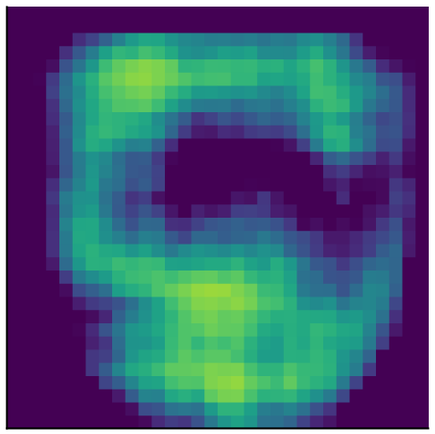

Label: Live
Quality: low
Frame: 69
Depth shown at 32×32

Decisions below use
VIDEO mean of 20 frames.
Color limits shared
across all cases/models.

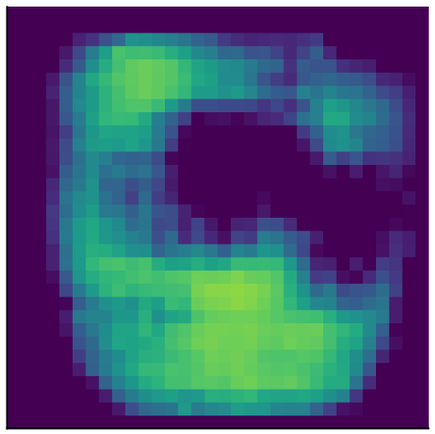

E1: Live / CORRECT
video=0.2664; t=0.1916

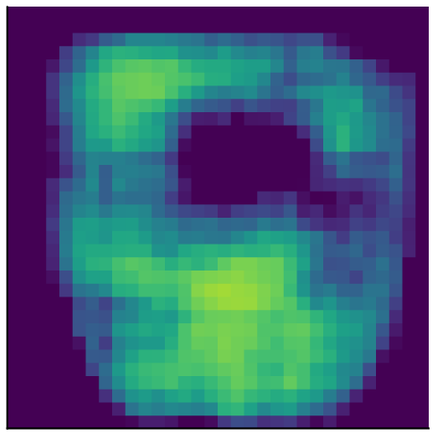

E2: Live / CORRECT
video=0.8187; t=0.4118

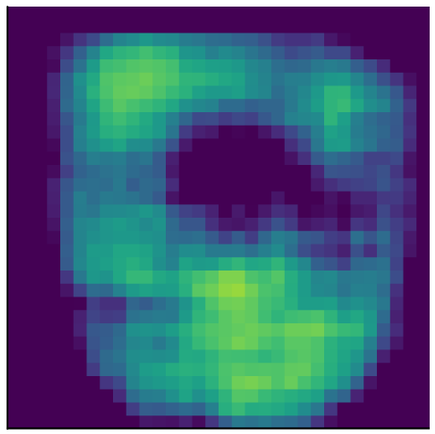

E3: Attack / ERROR
video=0.8249; t=0.8496

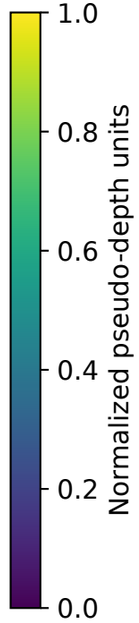

E3b: Live / CORRECT
video=0.8166; t=0.7518

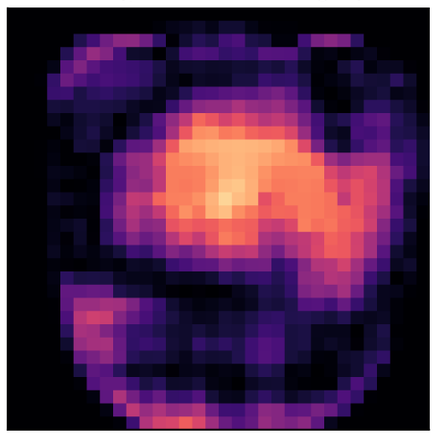

E4: Live / CORRECT
video=0.4871; t=0.4186

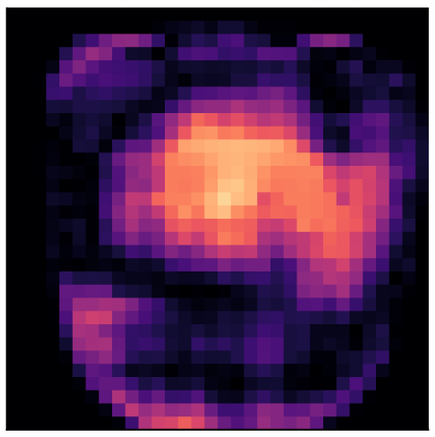

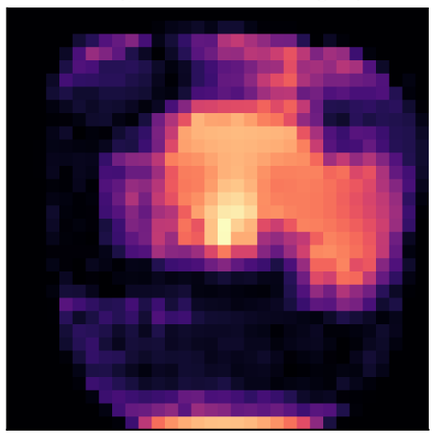

E1: |prediction − target|

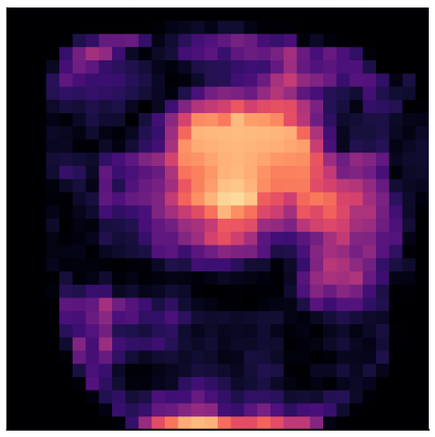

E2: |prediction − target|

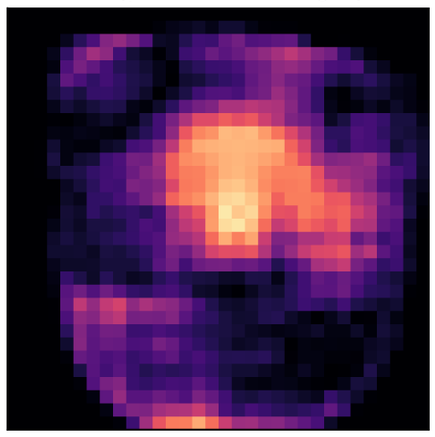

E3: |prediction − target|

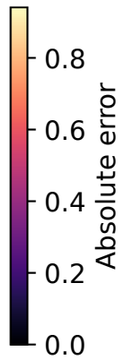

E3b: |prediction − target|

E4: |prediction − target|

Selected illustration, not aggregate performance. Middle frame; displayed decisions/scores are frozen VIDEO-level results. Shared color scales, no per-image normalization or prediction clipping. Native depth resolution 32×32.
